# Centralized data ingestion and consumption platform for your data

Integrating applications and data across the enterprise application suite is time-consuming due to individual integration approaches and implementation. The Datahub platform allows you to seamlessly integrate applications while ensuring data integrity and security. It supports legacy and latest protocols, enabling easy integration. The Datahub ingestion services also allow you to integrate any application while the access to the data is exposed via domain APIs aligned with industry standards for APIs such as LIMRA.

## Key features

Data ingestion using event-driven architecture

Cloud hosting

Data consumption using microservices architecture

API driven approach

# Key benefits

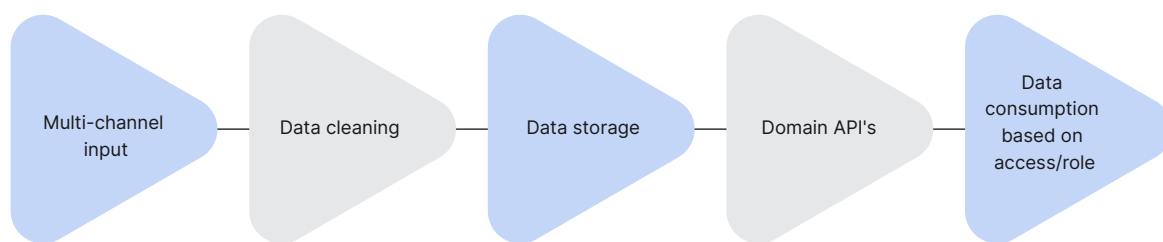

- Streamline data ingestion
- Enhanced data quality
- Easy integrations
- Data access via APIs
- Industry-standard APIs

Streamline data ingestion and optimize data consumption using SLK's cloud agnostic Datahub platform.

# Curated solution for data management

- **Event-driven architecture-based data ingestion:** Datahub's ingestion integration layer allows customers to ingest data using a push-pull process, including streaming data and legacy file-based integration
- **Microservices architecture-based domain-driven Access:** Datahub allows customers to expose APIs for third-party applications to easily integrate and retrieve domain-driven data. It allows standard data features like masking, security, and data access as part of domain APIs
- Built and hosted on **Azure Cloud and AWS**

# How it works

# Get the SLK's Datahub advantage for your business

- Reduce integration time across the enterprise application suite
- Smoothly ingest data from various source protocols such as file, HTTPS, SOAP, REST, and Streaming using DataHub
- Get smart data quality checks to ensure the validity and quality of ingested data.
- Integrate with API-based, stream-based options with ease
- Control access to data based on authorization using Datahub for exposure of Domain APIs
- Expose Domain APIs per industry standards, such as LIMRA for insurance APIs for data security
